PROFESSIONAL SUMMARY

Backend-focused Full-Stack Engineer with over 6 years of expertise in Go and microservices architecture. Adept at utilizing Domain-Driven Design and containerization (Docker, Kubernetes) to build, deploy, and scale robust applications. Strong track record of developing real-time, WebSocket-driven business systems and multitenant distributed platforms that streamline operations and ensure strict data isolation.

PROFESSIONAL EXPERIENCE

Senior Software Engineer | BM Technology PLC, Ethiopia

May 2026 - Present

- Designed, developed, and maintained high-performance microservices using Go for a scalable, multitenant SaaS ERP platform, implementing row-level security (RLS) policies to ensure strict data isolation across organizational units.
- Implemented and customized ERPNext modules to streamline enterprise resource planning operations and improve cross-departmental data flow.
- Integrated custom Go microservices with ERPNext APIs to seamlessly synchronize data and automate complex multitenant workflows.
- Architected event-driven workflows utilizing outbox patterns and asynchronous message consumers to reliably publish domain events across distributed services.
- Built and maintained highly optimized RESTful and gRPC internal communication layers leveraging Protocol Buffers for rapid microservice intercommunication.
- Optimized SQL queries, indexing strategies, and multi-tenant database transactions, significantly reducing latency and improving data consistency under heavy workloads.
- Implemented concurrent and deterministic processing systems using Go routines, channels, mutexes, and robust worker pools.
- Wrote comprehensive unit, integration, and load tests to ensure system reliability and production stability.

Software Engineer | Phibela Industrial PLC, Ethiopia

Aug 2021 – May 2026

- Led architecture and full-stack development of a real-time production monitoring and evaluation system (Go + React + PostgreSQL + WebSocket) used across 8+ production lines, reducing manual reporting time from ~2 hours to under 5 minutes per shift.
- Integrated ERPNext into production and sales workflows to enhance tracking, inventory management, and reporting capabilities.
- Customized ERPNext doctypes and automated data pipelines to synchronize real-time production metrics with central accounting modules.
- Spearheaded a web-based sales management system (Go + React + PostgreSQL) processing

8,000–12,000 transactions monthly, increasing sales team efficiency by ~35%.

- Designed and implemented a real-time WebSocket notification system delivering sub-second alerts to 50+ users for critical factory events.
- Containerized 20+ microservices with Docker and deployed to Kubernetes, reducing deployment time from 45+ minutes to ~8 minutes via CI/CD pipelines.
- Managed internal digital infrastructure, network configurations, and terminal hardware setups to seamlessly support factory software and automated reporting operations.

Backend Software Engineer (Contract) | Two F Times Trading PLC, Ethiopia

Feb 2021 – May 2021

- Architected and developed highly configurable RESTful APIs in Go (leveraging Gin, Echo, and Gorm) to power responsive, client-facing business solutions.
- Streamlined the deployment lifecycle by containerizing backend services with Docker and constructing Kubernetes-ready images, enabling rapid and scalable deployments.
- Successfully delivered a fully functional, production-ready backend system from scratch within an aggressive 3-month timeline.

Backend Software Engineer | Milto Labs PLC, Ethiopia

Feb 2020 – Jan 2021

- Designed and implemented microservices for a digital banking platform using Domain-Driven Design, Go, PostgreSQL, and MongoDB.
- Wrote high-performance, well-documented code that consistently passed strict code reviews and security standards.
- Achieved >90% test coverage on core services through comprehensive unit and integration testing utilizing standard Go testing packages and mock architectures.

TECHNICAL SKILLS

Languages: Go (Expert), TypeScript, JavaScript, Python

Backend & Protocols: Gin, Echo, Gorm, Fiber, Gorilla, gRPC, Protocol Buffers (Buf)

Message Brokers & Event Streaming: Redpanda, Apache Kafka, RabbitMQ

Databases: PostgreSQL, CockroachDB, MySQL, MongoDB, Redis

DevOps & Observability: Docker, Kubernetes, WebSocket, CI/CD, Git, Linux (Ubuntu), OpenTelemetry

Frontend: React, Material UI, Redux

EDUCATION

Bachelor of Science in Computer Science

Addis Ababa University, Ethiopia | 2015 – 2019
